The Goggle Guard™ Accessory Kit makes an already versatile product even more so. The Dual Lock™ reclosable fastener has a 5x stronger connection than typical hook and loop material. It uses a modified acrylic adhesive that provides a strong bond to all types of plastics and has a wide temperature range, excellent moisture resistance, solvent resistance, as well as UV resistance. Another benefit of the Dual Lock™ fastener is it resists dirt build up and is easier to clean than hook and loop fasteners.

The included o-ring provides an additional level of attachment to prevent the headlamp from falling off when at height. It also reduces the chance that the Goggle Guard™ clip could scratch larger goggles. Using the included foam pad eliminates any wiggle between the clip and brim to keep the headlamp steady.

Goggle Guard™ Accessory Kit

Does your headlamp ride up or fall off your hard hat? Headlamps and headbands are designed to fit on a persons head, not a hard hat. Our Goggle Guard™ clip with accessory kit can keep your headlamp safely secured to your hard hat.

Included items

- 2 - Dual Lock™ fasteners
- Alcohol prep pad
- O-ring
- Self-adhesive foam pad

How to Install:

1. Remove head band from light. This varies, but all lights have a slot to remove the headband. There is no need to cut the headband.

2. If your light has a foam forehead pad, remove it. See **Figure 1**.

Figure 1

3. With the included alcohol prep pad, thoroughly clean the mounting surface of the lamp and Goggle Guard™ (GGG) clip. Allow to fully dry. **See Fig. 2 - 4.**

4. The Dual Lock™ fastener works best when aligned vertically on the headlamp (See **Fig. 2**). Some headlamps aren't large enough to fit vertically, installing it horizontally is the only option (See **Fig. 3**). Apply the fastener in a rolling motion with even pressure across the entire fastener so that it fully adheres.

continued on back

5. Apply the other fastener piece to the Goggle Guard™ clip, matching the orientation from step 4. See **Fig. 4.** Let the fastener sit for 30 minutes before use. Max adhesion can take up to 72 hours, if your headlamp doesn't have a flat or continuous mounting surface (**See Fig. 5**), leave the light attached to the GGG clip for 72 hours.

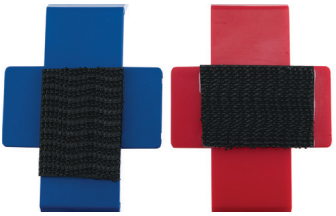

Figure 4

6. To help stabilize the GGG clip and prevent wiggling with a light attached, apply the included foam pad as shown in **Figure 6**. Use a pencil or similarly sized object to hold clip open to aid installation.

Figure 5

7 Attach the lamp to the Goggle Guard™ clip, you will hear and feel a "snap" when the fastener is fully attached to itself.

Optional Step: Use the supplied o-ring in addition to the reclosable fastener if working at height. Use **Fig.7** and **Fig.8** as a guide as to how best to install. Every light is a little different, but these methods should work for most.
